

Mathieu Charette is a professional ornithologist with over 15 year of experience in the field working both in North America and internationally. During this time he has spent travelling the watching birds and working for a variety of organizations on bird monitoring projects. His experience working with academia, consulting firms and regional groups have given the ability to share his passion of birds and bird related work.

While his expertise lies in seabirds and their habitats in the marine environment, Mathieu has worked on a variety of animal groups in most major ecosystems. Mathieu has conducted research and worked in the marine environment for most of his career in North America and the Caribbean. He has been living and teaching in Belize since 2011.

Mathieu has taught multiple undergrad field labs for a variety of wildlife-based courses in Universities throughout Canada. He has led multiple field crews and interns for a variety of research and conservation projects in the tropics, in Particular in Mexico, Belize, and in the Caribbean. He has had much experience teaching, imparting knowledge, and sharing his passion for the natural environment.

He has an extensive knowledge of the issues relating to human impacts on avian species and marine ecosystems in Belize and worldwide. He understands the importance of conservation while maintaining a balance with the human factor. His courses will always relate conservation issues to what is observed in the field and taught in classes.

Ultimately, Mathieu is particularly interested in maintaining biodiversity by integrating the needs of communities, industry, and the environment through education. He holds a BSc in wildlife biology from McGill University and an MSc in wildlife conservation from the University of New Brunswick.
